

MemoryCare — Decision Log

Version 3.2 · August 7, 2026 · Confidential · The single source of operating truth for the documentation package. Where any document conflicts with this log, the log governs.

Block A — Product and pricing decisions

The product line comprises four flat-priced products (no plot-size surcharges, no local/diaspora price difference): **Znnum (Inspection) AMD 20,000** — one visit, photo/video condition report, recommended-works list with prices; performed by the light crew; the fee is credited toward any package purchased within 30 days; the inspection also fixes the plot's GPS location in the client file (decided Aug 7). Znnum sits **outside the subscription mix** — a standalone entry product whose revenue is conservatively excluded from the model. · **Express AMD 60,000** — one deep-care visit; fully credited toward a subscription within 60 days; absent conversion, a repeat Express in the same year is AMD 40,000 (decided Aug 6). · **Optimal AMD 180,000** — 2 deep + 4 light visits; flagship. · **Maximum AMD 240,000 — re-engineered Aug 7 to 3 deep + 6 light visits (9/year)**, lifting gross margin from 36% to ~50%; the "monthly" promise was removed. Subscription mix remains 15/55/30; blended price AMD 180,000.

Family Circle referral reward (decided Aug 7): a memorial-date flower service with a photo report (cost ≈ AMD 3–5K). The earlier "free light visit for both" was cancelled — an invited relative views the same plot, so a visit adds no value to them.

Block B — Brand, site, and audience decisions (Aug 6)

Slogan everywhere: "**Honoring Memory, Caring for Loved Ones.**" · Client-facing terminology: "family sacred place" (ընտանեկան սրբատեղի), never "grave"; the word "bestseller" is not used (replaced by "flagship"). · Site launches in **three languages (ARM/ENG/RUS)**; French added later. · Cards are described as "international." · Launch is defined as "upon website readiness." · The designer has full creative freedom,

including alternative logo and palette concepts with a business case; **the only fixed element is the MemoryCare name.** · Primary site CTA: **free-consultation request** (an annual-ticket purchase warrants a human step); online checkout is secondary. · Site KPIs — team stretch goal: 90+ paying clients by week 16, lead-to-payment conversion $\geq 40\%$; **capital planning and the kill criterion run on the conservative base: 30-50 clients, 25%.** · Titles: **David Hambardzumyan — CEO; Hayk Manukyan — CBDO.**

Block C — Advisory council resolutions (adopted Aug 6)

Serviceable market adopted at **12-18K families base** (6-8K low, 25-35K high), replacing the earlier 5,000 estimate. · Growth follows the **base curve only: +120/+90/+65/+50%** (192 → 423 → 803 → 1,326 → 1,990). · Marketing is governed by a **CAC ladder** (AMD 146K → USD 1.5K → USD 4K → 10% of revenue; each step unlocks at blended CAC $\leq$ AMD 25,000). · Cemetery access is pursued as a **framework agreement with the operator**, not a letter. · Field salaries are net; the model applies a $\times 1.35$ gross-up pending the accountant's confirmation. · **Liability insurance plus an AMD 500K incident reserve precede the pilot.** · **Kill criterion: fewer than 40 paying clients by month 4 post-launch → stop and rebuild the model, not additional funding.** · Platform legal pack (US/EU terms with refunds, privacy policy, sub-account consents) ships before the first payment. · The September pilot runs with the CBDO plus two formally employed technicians. · Held open, to be decided on pilot data: "pay after first report" and the Express display role.

Block D — Governance and finance

Ownership: 100% David Hambardzumyan (CEO), funding in tranches as required. Operations: Hayk Manukyan (CBDO). · One-time launch costs (all one-off payments): design AMD 1.0M; platform AMD 1.2M; content production/SMM/integrations AMD 500K spread over months 1-3. · Monthly overhead $\approx$ AMD 500K including legal retainer, accountant, admin/CRM, software, and insurance. · Taxes: 10% turnover regime assumed for Years 1-2 (legal memorandum pending); the VAT-regime transition is

modeled from Year 3, with the pricing decision scheduled a year ahead. ·
Model v6.0 outputs (base case): revenue AMD 34.6M → 358.2M; EBITDA
–AMD 1.7M (Year 1) → +USD 306K (Year 5); peak funding ≈ AMD 5.0M
(~USD 13.8K) with 28% contingency and the incident reserve.

Execution calendar (current week)

Ameriabank onboarding (CEO) · contractor agreements signed; recruitment
ads live; site contact details replaced (CBDO) · tax memorandum delivered
and first cemetery-operator contact made (Legal) · accountant onboarded;
cemetery negotiation status reported (by Aug 20).
